1986 VITAL STATISTICS REPORT

PREPARED BY:

DEPARTMENT FOR HEALTH SERVICES
DIVISION OF HEALTH POLICY AND
RESOURCE DEVELOPMENT
HEALTH DATA BRANCH
FRANKFORT, KENTUCKY

INTRODUCTION

The 1986 Kentucky Vital Statistics Report includes data on vital events occurring in Kentucky or to Kentucky residents in 1986. Tables in this report display data on resident births, deaths, and marriages and divorces. The report also includes a table on occurrence births and one on occurrence deaths. Occurrence events are defined as the place where the event occurred, regardless of place of residence.

Whenever rates are used, a distinction is made as to whether the rate is crude, age specific, or age adjusted. Age specific rates may apply to either a single age or to an age cohort. The age adjusted rate applies to death rates only. A definition of each type of rate is in the appendix section. Tables and charts are in basically the same order as the 1985 Vital Statistics Report.

The information in this report represents the only official source of vital statistics data in the Commonwealth of Kentucky. The data are collected from certified records of births, deaths, and marriages and divorces by the Vital Statistics Branch of the Division for Health Policy and Resource Development. The data are then supplied to the Division's Health Data Branch (State Center for Health Statistics) for publication. Because these data have wide circulation and use, many agencies will quote vital statistics data as if they were officially from their agency. Often the data have been changed to reflect a particular method of counting or calculating. The State Center disclaims specifically any and all responsibility for any analyses, interpretations or conclusions which others may draw from these data.

There are two limitations with the data included in this report. The data are based on 1986 certificates that were received by the Vital Statistics Branch before April 7, 1987. Any 1986 certificates received after that date are not included in this report. Additionally, some data represent what was reported to the official data collector at the time the certificate was completed and is dependent upon the respondent's recall. An example of this type of limitation is the reporting on birth certificates of the actual trimester prenatal care began.

This report is organized into three major parts. The introduction, all narrative, and applicable analyses are located in the front of the report. The 1986 events are characterized and comparisons are made to previous years' data where applicable, and some are made comparisons among the regions. The second part is divided into three sections; births, deaths, and marriages and divorces. The birth and death tables are set up in two formats. The first format displays Kentucky data for 1986 and each year back through 1981. In a few instances, data are displayed for years prior to 1981. The second format shows data for 1986 only, however the geographic coverage is more detailed. This format gives data for the Commonwealth, the Area Development Districts, and the counties within each district. The final part of the report is the appendix which contains population data, a glossary of vital statistics terms, a list of vital statistics rate definitions, a grams to pounds and ounces conversion chart, and photostatic copies of official birth, fetal death, and death certificates in order to provide the user with some idea of the type of data that is collected. Charts and graphs of various design have been included throughout the report.

The table formats displayed in this report are not an exhaustive representation of the various ways in which vital statistics data may be collated, nor is the maximum amount of detail provided. Requests for vital statistics data in formats or detail different from that which is provided in this report should be directed to the address or telephone number below. In addition, any relevant questions, comments, or suggestions pertinent to this report should be sent to the same address.

1986 BIRTH STATISTICS

STATE SUMMARY

There were 51,776 resident live births in Kentucky in 1986, a decrease of 1.7 percent from 1985. The 1986 live birth rate was 13.9 per 1,000 population, compared to the national birth rate[1] of 15.5. The Kentucky birth rate has been declining steadily since 1980.

In 1986, resident white live births numbered 46,455 of which 7,187 were born to nonmarried mothers. Resident nonwhite live births numbered 5,321 with 3,095 to nonmarried mothers.

The teenage (ages 15 through 19) live birth rate was 58.2 live births per 1,000 female population, up only slightly from 1985. Births to mothers under the age of 15 occurred at a rate of 1.3 per 1,000 female population (ages 10-14).

Of all live births in 1986, 43.5 percent of the mothers have a high school education and 11.8 percent have more than 15 years education. Over one-third (34.2 percent) of all live births were to women 20-24 years of age, and 29.0 percent were to women 25-29 years of age. The percent of older women, those 30 and older, having a child has increased from 15.7 percent in 1980 to 19.3 percent in 1986.

Resident stillbirths decreased from 446 in 1985 to 417 in 1986.

Kentucky's fertility rate for 1986 was 59.2 per 1,000 female population ages 15-44 years. The national fertility rate[1] was 64.9.

Kentucky had one (1) set of quadruplets born. This occurred in District 15, Fayette County.

[1] Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 35/No. 13/Aug. 24, 1987.

1986 BIRTH STATISTICS

DISTRICT SUMMARY

The live birth rate fell in nine of the 15 districts from 1985 to 1986. The birth rate fell 7.6 percent in District 14 and 7.1 percent in District 13. However, the largest live birth rate increase was in District 9 with a percent change of 9.2.

In all 15 districts the 1986 live birth rate was lower than the 1980 live birth rate. In District 10, the 1986 live birth rate was 30.5 percent lower than it was in 1980.

The teenage (ages 15-19) live birth rate in 1986 was highest in District 13 with 77.0 live births per 1,000 female population 15-19. The lowest rate was 46.9 in District 15.

[1]Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 35/No.13/Aug. 24, 1987.

1986 DEATH STATISTICS

STATE SUMMARY

In 1986, Kentucky resident deaths totaled 34,788, a rate of 9.3 per thousand population, remaining unchanged from 1985. This is slightly higher than the national death rate[1] of 8.7 per thousand. County death rates ranged from a high of 17.4 in Hickman County to a low of 5.2 in Oldham County.

Of the total resident deaths, white males numbered 17,316 with a rate of 10.4 per thousand. The number of white female resident deaths was 14,804 with a rate of 8.4 per thousand.

The leading cause of death in Kentucky continued to be heart disease accounting for 36.9 percent of all deaths (see Figure 2-1). The Kentucky death rate for heart disease, 344.5 per 100,000 population, is again higher than the national rate[1] of 318.7

Kentucky's infant death rate declined from 11.2 in 1985 to 9.8 in 1986 or 12.5 percent. A one year drop of this size is very rare and should be interpreted with extreme caution. The national infant death rate[1] for 1986 was 10.4.

There were only two (2) maternal deaths in Kentucky during 1986, one each in Christian and Shelby Counties.

DISTRICT SUMMARY

From 1985 to 1986, the death rate decreased in Districts 4, 6, 7, 12, and 14. The largest drop was 4.0 percent in District 4. The two largest increases in the death rate took place in District 13 where the rate increased by 4.3 percent and District 1 with an increase of 4.2 percent.

In 12 of the 15 Districts, the 1986 death rate was lower than in 1980. The death rates ranged from 1.3 percent decline in District 5 to 7.0 percent decline in District 7. The three Districts with a higher 1986 death rate were Districts 1, 2, and 12 with the increase in District 1 death rate being 11.6 percent.

The 1986 infant death rate ranged from 7.9 infant deaths per 1,000 live births in District 4 to 18.1 in District 9. The 1986 infant death rate was lower than the 1985 rate in Districts 1, 4-8, 11-12, 14, and 15. In District 8, the infant death rate was down 57.2 percent. The infant death rate dropped by more than 30.0 percent in Districts 4 and 15. The infant death rate increased in 5 of the 15 Districts. The infant death rate in District 2 was 41.0 percent higher in 1986 than in 1985.

1. Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 35/No. 13/August 24, 1987.

1986 MARRIAGE AND DIVORCE STATISTICS

There were 46,460 marriages in Kentucky in 1986, a rate of 12.5 per 1,000 total population. This represents a minor increase from the 1985 rate of 12.3. See Table 3-A. The national marriage rate[1] for 1986 was 10.0. The highest rate of marriage occurred in District 3, Henderson County with a rate of 36.4 while the lowest rate of marriage occurred in District 5, Washington County - 6.0 per 1,000 population.

Kentucky had 19,000 divorces. Its divorce rate of 5.1 per 1,000 population is only slightly higher than the national divorce rate[1] of 4.8. The county experiencing the highest divorce rate in 1986 was Trigg County - 9.1, followed by Hardin County - 8.4, Fulton County - 8.3, and, Franklin County with a rate of 7.7.

[1] Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 35/No. 13/Aug. 24, 1987.

COMPARISON OF U.S. AND KY.
VITAL STATISTICS HIGHLIGHTS

This table compares U.S. and Kentucky vital statistics for the years 1986 and 1985. The rate of birth was lower in Kentucky both years. The 1986 total death rate remained unchanged from 1985 at both the national and state level with the Kentucky rate remaining higher than the national rate.

The 1986 U.S. data is provisional and subject to revision. The Kentucky data is the final official data.

	NATIONAL		KENTUCKY		
	1986	1985	1986	1985

VITAL STATISTICS GLOSSARY

Birth Weight - The weight of a neonate determined immediately after delivery or as soon thereafter as feasible. It should be expressed to the nearest gram. This weight should be measured preferably within the first hour of life before significant postnatal weight loss has occurred.

Cause of Death - Deaths, by cause, are classified according to the International Classification of Diseases, Ninth Revision, of the World Health Organization.

Childbearing Age - Women 15 through 44 years of age.

Fetal Death (Stillbirth) - Death prior to the complete expulsion or extraction from the mother of a product of human conception, fetus and placenta, irrespective of the duration of the pregnancy; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles. This definition excludes induced terminations of pregnancy.

Gestation Age - The number of completed weeks that have elapsed between the first day of the last normal menstrual period (not the presumed time of conception) and the date of delivery, irrespective of whether the gestation results in a live birth or a fetal death.

Infant Death - Any death at any time from birth up to, but not including, one year of age (364 days, 23 hours, and 59 minutes from the moment of birth).

Live Birth - The complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of the pregnancy, which, after such expulsion or extraction, breathes or shows any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached.

Low Weight Birth - Any neonate, regardless of gestation age, whose weight at birth is 2,500 grams or less.

Maternal Death - The death of a woman while pregnant or within 42 days after termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes.

Multiple Causes of Death - All those diseases, morbid conditions or injuries which either resulted in or contributed to death and the circumstances of the accident or violence which produced any such injuries.

Neonate - A liveborn infant.

Neonatal Death - Death of a liveborn neonate before the neonate becomes 28 days old (up to and including 27 days, 23 hours, and 59 minutes from the the moment of birth).

Perinatal Deaths - All fetal deaths of 20 or more weeks' gestation, plus deaths under 1 week.

Place of Occurrence - The place where the event occurred (regardless of place of residence).

Postneonatal Death - A death of an infant 28 days or more but under one year of age.

Race - The terms "white" and "nonwhite" are used to denote the racial groups. Definitions used for classifying race are those specified by the Bureau of the Census.

Residence Data - Data compiled according to the usual place of residence of the person to whom the event occurred without regard to the geographic place of occurrence. For births, infant deaths, and fetal deaths, the residence is defined as the mother's usual place of residence. (Resident data for Kentucky include events which occurred to residents of the Commonwealth irrespective of where event took place.)

Total Births - The total number of deliveries, live births plus fetal deaths.

Underlying Cause of Death - The underlying cause of death is either the disease or injury which initiated the train of events leading directly to death or the circumstances of the accident or violence which produced the fatal injury.

VITAL STATISTIC RATES

Age Adjusted Death Rate = Total number of expected deaths in a standard population (if the persons in this population had experienced the same age specific death rate as the population being adjusted) x 100,000 / Total Standard Population (based on the 1970 U.S. standard population)

Age Specific Birth Rate = Number of live births to women in specific age group x 1,000 / Estimated female population in that age group

Age Specific Death Rate = Number of deaths in specific age group x 100,000 / Estimated population in that age group

Cause Specific Death Rate = Number of deaths from a specific cause x 100,000 / Estimated total population

Crude Birth Rate = Number of live births x 1,000 / Estimated total population

Crude Death Rate = Number of deaths x 1,000 / Estimated total population

Divorce Rate = Number of divorces and annulments x 1,000 / Estimated total population

Fertility Rate = Number of live births x 1,000 / Female population 15-44 years of age

Fetal Death Rate = Number of fetal deaths x 1,000 / Total number of live births

Infant Death Rate = Number of deaths under 1 year of age x 1,000 / Total number of live births

Low Weight Birth Rate = $\frac{\text{Number of live births weighing 2,500 grams or less} \times 100}{\text{Total number of live births}}$

Marriage Rate = $\frac{\text{Number of marriages} \times 1{,}000}{\text{Estimated total population}}$

Maternal Death Rate = $\frac{\text{Number of deaths due to complications of pregnancy and childbirth} \times 10{,}000}{\text{Total number of live births}}$

Neonatal Death Rate = $\frac{\text{Number of deaths under 28 days of age} \times 1{,}000}{\text{Total number of live births}}$

Nonmarried Birth Rate = $\frac{\text{Number of births to nonmarried women} \times 1{,}000}{\text{Total number of births}}$

Perinatal Death Rate = $\frac{\text{Number of fetal deaths and deaths under 1 week} \times 1{,}000}{\text{Total number of births}}$

CAUSE OF DEATH CODES

In tables 2-I, 2-J, and 2-N, data for selected causes of death are provided. The cause of death and relevant ICD codes are listed below. The source of the ICD codes is International Classification of Diseases, 1975 Revision, World Health Organization.

Cause of Death	ICD Codes
Heart Diseases	390-398, 402, 404, 410-416, 421-429
Malignant Neoplasms	140-208
Cerebrovascular Disease	430-438
Accidents	E800-E949
Influenza & Pneumonia	480-487
Diabetes Mellitus	250
Suicide	E950-E959
Arteriosclerosis	440
Nephritis & Nephrosis	580-589
Cirrhosis of Liver	571
Arteries, Arterioles, Capillaries	441-448
Certain Causes in Early Infancy	760-779
Septicemia	038
Homicide (Includes Legal Intervention)	E960-E978
Congenital Anomalies	740-759
Emphysema	492
Hernia & Intestinal Obstruction	550-560
Symptoms & Ill-Defined Conditions	780-799
Hypertension	401, 403
Other Infective & Parasitic Diseases	*

* ICD Codes: (001.0 - 003.9) (005.0 - 005.9) (020.0 - 032.9) (035) (037) (039.0 - 041.9) (046.0 - 054.9) (056.0 - 088.9) (097.0 - 136.9) (139.0 - 139.8)

GRAMS TO POUNDS AND OUNCES CONVERSION CHART

Birth weight is replacing gestation period as an indicator of fetal mortality. Fetal mortality is the measure which indicates the likelihood that a pregnancy in a population group will result in a fetal death. Because of unfamiliarity with gram weights and a prevailing tendency to think in terms of pounds and ounces, a conversion chart is presented below for the convenience of the reader.

500 grams or less	=	Under 1 lb 2ozs
501 - 1,000 grams	=	1 lb 2 ozs - 2 lbs 3 ozs
1,001 - 1,500 grams	=	2 lbs 4 ozs - 3 lbs 4 ozs
1,501 - 2,000 grams	=	3 lbs 5 ozs - 4 lbs 6 ozs
2,001 - 2,500 grams	=	4 lbs 7 ozs - 5 lbs 8 ozs
2,501 - 3,000 grams	=	5 lbs 9 ozs - 6 lbs 9 ozs
3,001 - 3,500 grams	=	6 lbs 10 ozs - 7 lbs 11 ozs
3,501 - 4,000 grams	=	7 lbs 12 ozs - 8 lbs 13 ozs
4,001 - 4,500 grams	=	8 lbs 14 ozs - 9 lbs 14 ozs
4,501 - 5,000 grams	=	9 lbs 15 ozs - 11 lbs 0 ozs
5,001 grams or more	=	11 lbs 1 oz and over
